

AI bookkeeping for the UAE's new tax era.

Replaces your bookkeeper, not your accountant.

Knieval Kudzai Moyo · Founder & CEO · Dubai, UAE

mizan-tan.vercel.app · kudzaimoyo18@gmail.com

Every UAE SME just became a taxpayer — overnight.

- ◆ Since **1 June 2023**, the UAE charges **9% corporate tax** on profit above AED 375k — on top of 5% VAT.
- ◆ Even **0%-rated free-zone companies** must **register, keep IFRS books and file**. The paperwork has no exemption.
- ◆ **Small Business Relief ends 31 Dec 2026**. The grace period is closing on every SME.
- ◆ Miss registration and it's an **AED 10,000 penalty** — and it accumulates.
- ◆ Yet most expat-owned free-zone SMEs have **no finance team, informal books, and can't afford** a AED 2k–5k/mo bookkeeper.

"Poor bookkeeping doesn't lower your tax — it raises it."

Mizan does the bookkeeping. You just confirm.

- ◆ Connect a bank and upload invoices — AI **imports, categorises and reconciles** every transaction.
- ◆ The magic moment: **~90% auto-categorised**, only **~10% flagged** for a human glance.
- ◆ Live **management reporting** — P&L and a real-time VAT / corporate-tax position.
- ◆ Then it **bridges to a partnered, licensed FTA tax agent** who reviews and files.

**Replaces your bookkeeper,
not your accountant.**

Record → file, on autopilot.

The post-import split is shown to the owner as a 90 / 10 bar — the product's core "magic moment".

A regulatory deadline meets an AI that can finally do the work.

Regulation

9% corporate tax live since 2023; Small Business Relief sunsets end-2026. Compliance is now mandatory, not optional — a hard forcing function.

Technology

LLMs only just became reliable enough to read messy bank statements and mixed Arabic/English invoices at near-human accuracy. "90% / 10%" is now real.

Market

Record new-company formation in Abu Dhabi & MENA. Greenfield, expat-owned SMEs have no incumbent accountant to displace — they want a first solution.

Window: the next 18–24 months, before incumbents ship credible AI bookkeeping.

A whole market forced into the books at once.

- ◆ **TAM** — every UAE company now in scope of corporate tax. SMEs are ~**94% of all UAE businesses**.
- ◆ **SAM** — expat-owned **free-zone SMEs**: greenfield, no finance function. Our beachhead.
- ◆ **SOM (Yr 1-2)** — first Abu Dhabi free-zone cohorts + converted waitlist.
- ◆ **Expansion** — UK **Making Tax Digital**: same engine, swappable region adapter.

9%

Corporate tax on profit > AED 375k (live since Jun 2023)

AED 10,000

Penalty for a single late registration — and it stacks

Dec 2026

Small Business Relief expires — deadline pressure peaks

Market figures directional — to be firmed with FTA / free-zone registry data.

Self-serve SaaS, plus a filing rev-share.

STARTER

AED 349/mo

GROWTH

AED 999/mo

Most popular

PRO

AED 2,900/mo

- ◆ One-time setup AED 1,500 (waived on Growth / Pro). **First 50 customers: free setup + locked founding price.**
- ◆ **Revenue share** with the licensed FTA tax-agent partner on each regulated filing.
- ◆ Land **direct self-serve** (owner drives the app) → expand to **white-label for firms** later.
- ◆ UK tier in GBP (39 / 79 / 149) — second region, same product.

Tools make you do it. Firms charge a fortune. Mizan does both.

WHO	WHAT THEY GIVE	THE GAP
Zoho Books · QuickBooks · Xero	Cheap DIY ledgers	You're still the bookkeeper; no UAE filing bridge
Traditional accounting firms	Do the work & file	Expensive, slow, not self-serve
Mizan	AI does the bookkeeping	Self-serve + AI does 90% + bridge to licensed filing

We own recording & light reporting; humans keep advisory & the signature.

Shipped, live, and bootstrapped.

- ◆ **Product v0.1 live** — marketing site + waitlist, magic-link / Google auth, client portal (onboarding, dashboard, documents, settings) and admin (client list + compliance CRUD).
- ◆ **Two regions live** — UAE and UK landing pages, region-tagged waitlist.
- ◆ **GTM in motion** — founder talking-head Reels with A/B-tested hooks driving waitlist.
- ◆ **Capital-efficient** — built solo, end-to-end, on a bootstrap budget.

Stage: post-launch, pre-revenue — converting the waitlist into paid pilots.

Built by a founder who lives in the market.

Knievel Kudzai Moyo — Founder & CEO

Zimbabwean, based in Dubai. Leads product and engineering and built the entire Mizan platform end-to-end — Next.js, Supabase, and the AI categorisation / OCR engine. LinkedIn: /in/knievel-moyo-kudzai-553091304

- ◆ **Founder-market fit** — lives in the exact UAE SME environment Mizan serves.
- ◆ **Technical & fast** — full product shipped solo, capital-efficient.
- ◆ **Lean by design** — AI-native build keeps the team small and the burn low.

Bootstrapped to product. Raising to scale.

To date

Bootstrapped — AED 0 external capital. Full product, two regions and GTM content shipped on founder budget.

Raising — Pre-seed

Use of funds: (1) harden the AI engine on real UAE data, (2) convert waitlist → paying pilots, (3) sign the FTA-agent filing partner, (4) Abu Dhabi market entry via Hub71.

Hub71 Access incentive: AED 250k in-kind + AED 250k cash (SAFE) — directly funds the next 12 months.

First 90 days at Hub71.

1 • Engine

Use Hub71+ AI compute and AWS / Nvidia access to push auto-categorisation past 90% on real UAE bank & invoice data.

2 • Pilots

Convert the waitlist into a first Abu Dhabi free-zone pilot cohort; operationalise the human-in-the-loop review.

3 • Compliance

Use proximity to ADGM & government partners to formalise the "software + licensed FTA agent" filing model.

4 • Capital

Open pre-seed conversations through Hub71's investor network; test bank / free-zone partner channels.

Outcome by month 3: live AD pilot cohort • signed filing partner • metrics-backed Demo Day story.

Clean books, on autopilot — ready to file.

Let's build the UAE's AI bookkeeper from Abu Dhabi.
